

SDLC Phase 1: Requirement, Analysis and Planning

We are making a Martial Arts App, where users can pick their fighting style – no belts, no ranks, just what they want.

1. What are we Doing?

This application aims to simplify the decision-making process by recommending martial arts styles based on user preferences. It provides insights into each style, including whether it incorporates a belt or hierarchy system, thereby helping users select the most suitable martial art for their interests and goals.

We are making a Java App that lets the users pick Martial Arts based on what they like:

Striking – Karate, Taekwondo, Boxing

Grappling – Judo, Wrestling, Brazilian Jiu Jitsu

Punching – Street Fighting, Wing Chun, Jeer Kune Do

Hybrid –MMA, Systema, Krav Maga

Weaponry – Kendo, Fencing, Kali

2. Problem Solving

This is a unique Application that we have not found on GitHub or anywhere else, so for anyone confused getting into Martials Arts and not knowing if it has Ranking System or not and if they Preference. Some people just want to learn Different Styles without Worrying about Belt System.

So, A simple, User-Friendly App where you just pick what you want and learn about it

3. What needs to be done to make this work out ?

Human Resources -

Core Logic – Concepts of Adv Obj Prog (

UI Designer – Layout for Project (Draw.io)

Backend - Java

Material Resources -

Prog Language – Java, VS Code

4. Plan, deadline and Scope

In our App We will also give info and like to enter person Height, Weight and based on the summary of their body type and their previous childhood-teen physical activities

3 times in a week meeting to check progress

Use of GitHub

Everyone has a clear role which avoids confusion and keeps the project moving efficiently

Mid-April (possibly)
